Winter Weather Response Plan 2013 - 2014 City of Snohomish - Public Works

The City of Snohomish is committed to providing the best level of winter weather response it can with existing funding and resources. To help you understand what level of service we can provide and what to expect during winter weather events, we have prepared a winter weather snow and ice response plan. To view the 2013 - 2014 Snow & Ice Response Plan visit our city web site or stop by City Hall at 116 Union Avenue to request a copy of the plan (including plowing map). If you have questions about the plan contact Public Works Operations at (360) 568-7070 (Mike Johnson, Public Works Services Manager).

Our first priority in winter weather response is to keep essential roads open for emergency response services, delivery of goods to and from the City, and access to essential services. The roads most commonly used for these purposes have been identified and assigned a priority of 1 or 2. Priority 1 and 2 routes will receive winter weather services before all other roads. During

moderate to heavy winter weather events we may only be able to provide winter weather response services to Priority 1 and 2 routes.

Snow Plowing. Plowing is primarily used to remove significant accumulations of snow from the road surface, just prior to applying sand and salt or other anti-icing agents. Plowing operations generally begin when snow accumulation has reached two inches or more. Plowing operations are limited by equipment availability (two plows).

Sanding. A 5/1 sand and salt mixture will be used on City streets to help reduce and remove ice formation in critical areas.

Sand is primarily used to provide traction at intersections, curves, and grades. Sanding operations begin when hills, sharp corners, and intersections become slippery and difficult to travel. Known problem areas are sanded (with salt added) routinely during snow and ice weather events. Adding salt to the sand helps to melt the underlying ice and break the bond between the ice and road surface.

Application of Anti-Icing Agents. Anti-icing is the practice of applying chemicals to roadways to prevent frost and ice from forming. If it does, de-icer helps break the bond to keep it from compacting and bonding onto the roadway.

The City of Snohomish does not own anti-icing equipment, so arrangements have been made with Snohomish County Public Works to apply anti-icing agents on the surface of pre-designated City roadways and bridges when icy conditions have been forecast. Snohomish County Public Works will apply anti-icing agents for the City of Snohomish when the County is applying anti-icing agents to County roadways adjacent to City limits. This service is contingent upon the availability of Snohomish County personnel and equipment.

Hill Closures. Several roads in the City contain steep hills that are unsafe to travel during winter weather events. These hills will be closed while travel conditions on them are unsafe.

❖ ❖ Calendar 2013 ❖ ❖
